Haamln

Make ownership of every product digital, verifiable
and connected throughout its lifecycle.

Presented by : **Rohith Sagar Kata**

A STORY ·

Meet Raju

Raju bought a new refrigerator. Keeping the invoice and warranty should be simple. It isn't.

1 At the shop

He gets the bill on paper. The warranty comes on WhatsApp. A copy goes to his email. Three places before he even reaches home.

2 Months go by

The paper bill gets lost in a drawer. The WhatsApp message is buried under too many chats. No one tells him the warranty is about to end, so he never extends it.

3 It breaks (month 14)

One day the fridge stops working. He needs the bill and the warranty but can't find either. And he doesn't know who to call: the shop, the brand, or some technician?

4 What it costs him

He wastes days looking for papers. The warranty may already be over. He calls the shop, but even they can't quickly find his bill and he pays for the repair himself.

~ Every product tells the same story — fridge, TV, phone, washing machine, fan, lights and every electronic product.

THE PROBLEM

- 1 Lost Invoices**
Lose proofs of purchase, miss warranty windows, struggle at resale and service.
- 2 Broken Warranties**
No single place to track expiry across brands. Most warranties expire unused.
- 3 No Ownership Record**
Many customers have limited visibility into the products they own and their lifecycle.
- 4 Poor After-Sales**
Service centres can't verify coverage fast — manual calls, delays, frustration.
- 5 Avoidable paper waste**
printed invoices and warranty cards create resource use and are frequently lost, damaged or discarded.

WHY IT MATTERS

Each one solves a piece. None of them connect.

Paper receipts

Can be lost, faded, damaged or difficult to organise.

WhatsApp & SMS

May be digital, but records remain scattered, hard to search and disconnected from the product lifecycle.

Retail POS

Usually finish at billing and do not create a cross-retailer customer ownership record.

Warranty apps

May manage registration or claims but may not connect retailer billing, technicians, service history and ownership transfer in one flow.

THE SOLUTION

One record. Every product.

HaamIn gives every product a single, verifiable ownership record — invoice, warranty, service history and future ownership events, all in one place.

RAJU, NOW

At checkout, the store adds his fridge to his HaamIn wallet automatically. Fourteen months later he opens the app, sees the warranty is still valid, taps once, and a technician is on the way. No lost paper. No phone calls.

Everything in one place

Invoice, warranty and service history together — not paper, WhatsApp and email.

Nothing expires unnoticed

A reminder before the date, then one tap to extend warranty or add insurance.

The right help finds them

Book a verified technician for the date they want — every repair recorded.

The whole cycle, digital

From purchase to repair, warranty, and service — every product record stays connected in HaamIn.

THE PLATFORM

THE PRODUCT · WEB

Retailer & Warranty/Insurance workspace

Retailer

Billing & product record

Warranty / insurance provider

Plans, coverage & claims

THE PRODUCT · MOBILE

In every customer's pocket

Everything a customer owns - invoices, warranties, reminders in - one wallet. Every job a technician needs, on the go.

Customer

Technician

HOW IT WORKS

One phone number from the purchase to every future repair, with nothing left on paper.

At the retailer

- A customer buys a product from a retailer.
- Using HaamIn, the retailer enters the customer's phone number.
- Existing customer → their details pop up instantly.
- New customer → created on that number, with a few basic details.
- The digital invoice + warranty are sent to the customer's mobile.

On the customer's phone

- The customer logs in with a quick OTP - just their number.
- Everything they own sits in one place.
- Invoices, warranties and product details, all together.
- The customer can extend the warranty or add insurance before it expires.
- If something breaks, book a technician for the date & time they want.

The people it connects

- **Technicians** — steady work and income. Customers reach them directly via HaamIn to schedule an appointment, and every visit is booked, recorded, and paid through HaamIn.
- **Warranty & insurance providers** — a direct line to customers, exactly when cover is needed.

EARLY VALIDATION

Signal from real interviews on the ground in Hyderabad.

Electronics & electrical
retailers interviewed

~9 / 29

Struggled to locate an
invoice or warranty

~26 / 29

Expressed interest in the
concept (~90%)

52 / 52

Currently share
invoices via WhatsApp /
email / SMS (~30%)

1 retailer committed as the initial MVP test partner — strongest problem-solution fit. Others expressed interest but have not yet made formal pilot commitments.

WHY NOW

India digitised everything except what you own.

Digital identity is universal

Aadhaar + mobile-first users mean a phone number can anchor a verifiable ownership record.

UPI normalised digital payments

Retailers and customers already transact digitally — digital billing is a small next step, not a leap.

Open-network precedent

UPI and ONDC showed India adopts shared digital infrastructure rapidly when friction is low.

Smartphone-first after-sales

Customers now expect to manage warranties, service and documents from an app — not a drawer.

MARKET OPPORTUNITY

Sized on what HaamIn actually earns per bill, not a share of sales. Every figure referenced or flagged.

TAM

India warranty-backed electronics & appliances

~₹2 lakh cr market (2024) → ₹3 lakh cr by FY29 · 125M+ units sold in H1 2024

SAM

~65% of electronics retail is still unorganised (2021)

Traditional retailers digitising billing — HaamIn's wedge

SOM

Telangana beachhead, Years 1-3 — Hyderabad clusters

~4,300 electronics & appliance retailers · directory estimate

Win the street, then the state, then the nation

Hyderabad Cluster Pilot

Door-to-door onboarding of electronics retailers in dense market clusters. Free billing removes all friction to adopt.

Density Before Distance

Saturate one area so customers see HaamIn at every nearby store. Rewards then make them ask non-member stores to join.

Technician Supply

Sign warranty/insurance partners and technicians early so customers get value from the first bill onward.

Telangana → National

Replicate the cluster playbook city by city; activate per-bill monetisation only after deep adoption (Year 4).

WHY HAAMIN STANDS OUT

Capability	Warranty apps (Dyrect, etc.)	POS / Billing (SnapBizz, etc.)	Ownership (Clyde – US)	HaamIn
Retailer-initiated digital billing	✗	✓	✗	✓
Auto customer & ownership record	✗	✗	✓	✓
Warranty lifecycle + extensions	✓	✗	↻	✓
Insurance + technician marketplace	✗	✗	✗	✓
Cross-retailer customer graph	✗	✗	✗	✓
Built for India / Bharat retail	↻	✓	✗	✓

Six revenue streams adopt free, monetise later

Build the ecosystem free for retailers first; switch on per-bill monetisation once adoption is deep. Commission streams earn from day one.

WHERE WE ARE

Foundations done, prototype in build, market next.

DONE

- ✓ Phase 1 design screens complete
- ✓ Requirement gathering complete
- ✓ User research & groundwork complete
- ✓ Documentation, workflow & revenue model complete
- ✓ Applied under Indian IP Class 42

NEXT

- Launch the prototype to first users
- Onboard the first Hyderabad retailer cohort
- Iterate on user feedback
- Expand & capture the market across Telangana

IN PROGRESS
Building the working prototype

ROADMAP

The next 18 months, milestone by milestone
